

166th Avenue Townhomes Capital Facilities Map – LAND-2015-00876

** The Downtown sub-basin currently has three operational water quality facilities and water quality facility number 264R is planned to be constructed in the future. The operational water quality facilities have capacity to treat 225 acres. The City has approval from the Department of Ecology to treat the entire Downtown sub-basin as a single basin. Therefore, the City will sell water quality to projects in the form of Capital Facilities Charges until 225 acres are sold. The 166th Avenue Townhomes project does not have water quality for the site, but it is within the 225-acre basin that is receiving water quality treatment.
